

## “Other” Rating Responses

You should only have to document information on one form. There are too many forms.

The CAFAS has to be completed too early, the information is \_\_\_\_.

Very young children need assessment just for them.

Overall usefulness for client or clinician (currently lacking).

Other language.

Combine tools into on package.

Score immediately/Receive back in timely manner.

Print out in intake assessment – CBCL/YSR.

Time consuming/Detracts for quality of services.

Appropriate color of paper of test. Red is not \_\_\_\_.

Consumer satisfaction.

Pay consumers to complete.

Clinical conceptualization.

Short & easy for client to understand & complete.

Reading level is too high for children and a few parents.

The symptoms are too behavioral.

Objective, non-self\_\_ instruments.

More information.

Improved lie(?) scale.

Feedback.

Must realize \_\_\_\_ is a factor a tool not to judge parents.

Client involvement.

Ease of use for treatment planning.

Output should be easier to read.

External validity.

Wish statistical feedback came with more user-friendly format (i.e., basic meaning of data such as a t score to indicate...)

Use of data for program evaluation.
