*N is the total sample size used in the logistic regression analysis to generate predicted recidivism values. It is not the sample size with a particular Static-99 score. This is because logistic regression uses information on the relationship between Static-99 and recidivism in the complete dataset to generate predicted values.

Note: Some of the 10 year CSC rates are lower than the 5 year rates due to sampling error (not all of the offenders in the 5 year sample were followed for the full 10 years).
